EXPERIENCE

Automators Lab | *AI/ML Intern*

May 2025 – Sep 2025

- Built multi-agent AI systems using LangGraph and LangChain for automated call analysis, proposal generation, and task orchestration across specialized agents, integrating GPT, Claude, Gemini, and LLaMA models.
- Developed 10+ custom MCP servers connecting AI agents to external APIs, databases, and business applications, including tool design, authentication, and deployment.
- Engineered Retrieval-Augmented Generation (RAG) pipelines for context-aware AI assistants and document-intelligence workflows, enabling knowledge retrieval over business data.
- Created event-driven lead-generation automation with n8n, integrating LLMs, CRM platforms, and web scrapers to streamline prospect identification and reduce manual outreach effort.

PROJECTS

SixRise – AI Shopping Visibility Platform | *Python, FastAPI, LLMs, Shopify Admin API, pgvector*

- Built and shipped a live Shopify embedded app that lifts merchant visibility in AI shopping assistants (ChatGPT, Perplexity, Gemini) by auditing catalog data, publishing grounded fixes, and measuring share-of-model uplift vs. named competitors.
- Engineered an eight-node graph-shaped async agent pipeline that fans buyer-intent queries across LLM engines (Perplexity Sonar, OpenAI), parses cited brands, audits catalog gaps, and computes per-engine share-of-model.
- Designed a grounded Optimizer with a negative-grounding guard and two-layer staleness gate that never fabricates attributes, routing every Shopify Admin API write through preview/approval so no hallucinated data reaches a live catalog.
- Architected a TypeScript/Python monorepo on Northflank, Neon (Postgres + pgvector), and Upstash Redis with split-schema ownership (Prisma sessions, Alembic business tables); fixed a connection-pool advisory-lock deadlock via transaction-bound session storage.

ContextCode – AI Codebase Onboarding Tool | *FastAPI, Celery, RAG, ChromaDB, Postgres*

- Architected a full-stack RAG system that indexes GitHub repositories using Tree-sitter AST parsing for function and class-level chunking across Python, JavaScript, and TypeScript, enabling cited, hallucination-resistant Q&A over codebases of up to 10,000 files.
- Built a production cost-control layer combining Cloudflare Turnstile and atomic Redis dual rate limiting (per-session and global), enabling a public zero-signup demo with bounded API spend and bot protection.
- Deployed a 5-service backend (FastAPI, Celery, ChromaDB, PostgreSQL, Redis) on Railway with async SQLAlchemy and SSE progress streaming, paired with a Next.js frontend on Vercel and validated by 230+ automated tests (pytest, Playwright).

LEADERSHIP EXPERIENCE

CS Hub – Computing Students' Hub | *Events & Academics Team*

Toronto, ON

- Organized and promoted events, workshops, and academic initiatives as part of the Events & Academics team, driving student participation and community engagement across the club.
- Built relationships with students, faculty, industry partners, and alumni, and collaborated with other clubs to develop new opportunities for members.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML/CSS, R

Frameworks: FastAPI, React, React Router 7, Next.js, Flask, Node.js, Celery, Arq, Streamlit

Tools & Platforms: Git, Docker, Shopify Admin API, Railway, Northflank, Vercel, Neon, Upstash, Google Cloud

Databases: PostgreSQL, pgvector, MySQL, Redis, ChromaDB (Vector DB)

Concepts: REST API design, System Design, Multi-Agent Systems, CI/CD, Agile, Full-Stack Development

EDUCATION

York University — BSc. Honours in Computer Science

Toronto, ON | Expected Dec 2026

- Relevant Coursework: Machine Learning, Artificial Intelligence, Data Structures & Algorithms, Databases, Operating Systems, Computer Networks, Software Design.
